CYPHIX

IN DEVELOPMENT · NOT FOR SALE

Clinical Depth. Wearable Ease.

A 6-lead ECG module on the strap of the watch you already wear. It records when symptoms occur and sends the recording directly to the clinician.

Concept imagery

17.9M Deaths a year from cardiovascular disease (WHO)

$4.53B Global mobile ECG market

$2.76B Home healthcare segment

The need for an ECG doesn't stop at the clinic door.

Symptoms are often transient: by the time a patient reaches care, the ECG may be normal. The need comes after discharge, between appointments and at the moment a symptom appears.

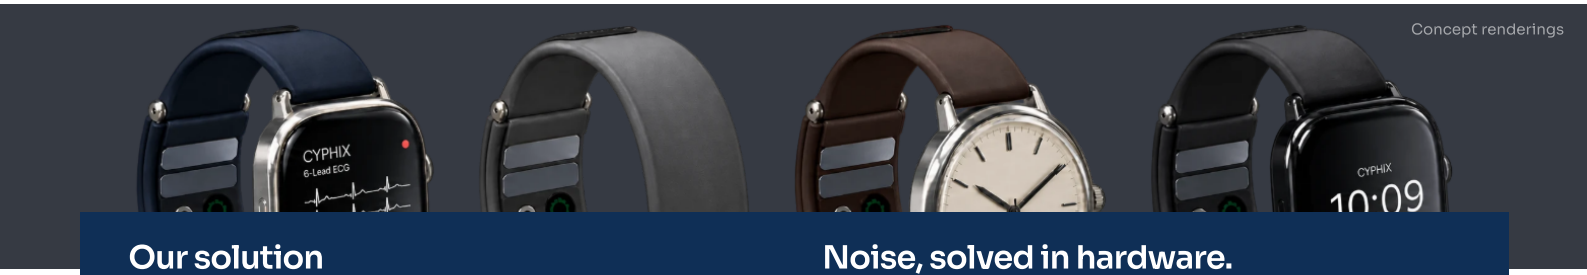

Today's options ask for a compromise

Clinical depth
HOLTER MONITORS, 12-LEAD DEVICES
Clinical quality, but adhesive electrodes, wires and a professional setup.

Monitoring over time
PATCHES
The rhythm over days, without reliable ST-segment morphology.

Comfort
SMARTWATCHES
One lead, mainly for atrial fibrillation; six-lead devices are carried separately.

Concept renderings

Our solution

A module on the strap of the watch the patient already wears. When symptoms occur it records a 6-lead ECG (I, II, III, aVR, aVL, aVF) and sends it directly to the clinician, without patches, wires or professional setup. On a smartwatch, as a bracelet, on an analog watch, or as the Cyphix watch.

Noise, solved in hardware.

Each contact point is an array of elements, each with its own ADC, weighted in real time by the quality of its actual contact. An element losing its contact counts for less, and the lead keeps its detail.

Multi-element array. Patent filed in Israel.

Business model

WHO PAYS
Health systems: health funds and public clinics.

FOR WHAT
A follow-up programme: the device stays with the patient.

HOW
A fixed monthly fee for every active patient.

The team

Elio El Hassrouny
Founder & CEO
ex-Samsung R&D

Dr. Tamir Wolf, MD
External Clinical Advisor

Where we are.

- Working prototype
- Technological and algorithmic proof of feasibility
- Patent pending on the core technology
- Israel Innovation Authority · Tnufa programme

What comes next.

- **A wearable product,** ready for a trial
- **A clinical feasibility trial,** 20 to 50 patients
- **Regulatory validation** and an FDA submission

CYPHIX
Clinical Depth. Wearable Ease.

cyphix-landing.vercel.app

Product images are concept renderings and imagery. Cyphix is in development and not for sale. It records and displays ECG data; it does not provide a diagnosis.
