Now raising our seed round

CYPHIX

Clinical Depth.
Wearable Ease.

A wearable 6-lead ECG acquisition system designed to capture clinically relevant cardiac signals when symptoms occur, and transmit them directly to the clinician, without adhesive patches, wires or professional setup.

Concept imagery

$4.53B TAM Global mobile ECG market

$2.76B SAM Home healthcare segment

6-lead ECG on the watch you already wear

The need

1 in 3 deaths worldwide is cardiovascular. Symptoms are often transient: by the time a patient reaches care, the ECG may be normal.

The trade-off

Today it's wearable ease *or* clinical depth. Cyphix delivers both, on the watch people already wear. The crowded market is our installed base.

Where we are

- Working prototype
- Technological & algorithmic proof of feasibility
- Patent pending on the core technology
- Israel Innovation Authority · Tnufa programme
- **Next step.** A wearable strap, ready for its first trial.
